Do Moral Appeals Facilitate Compromise?

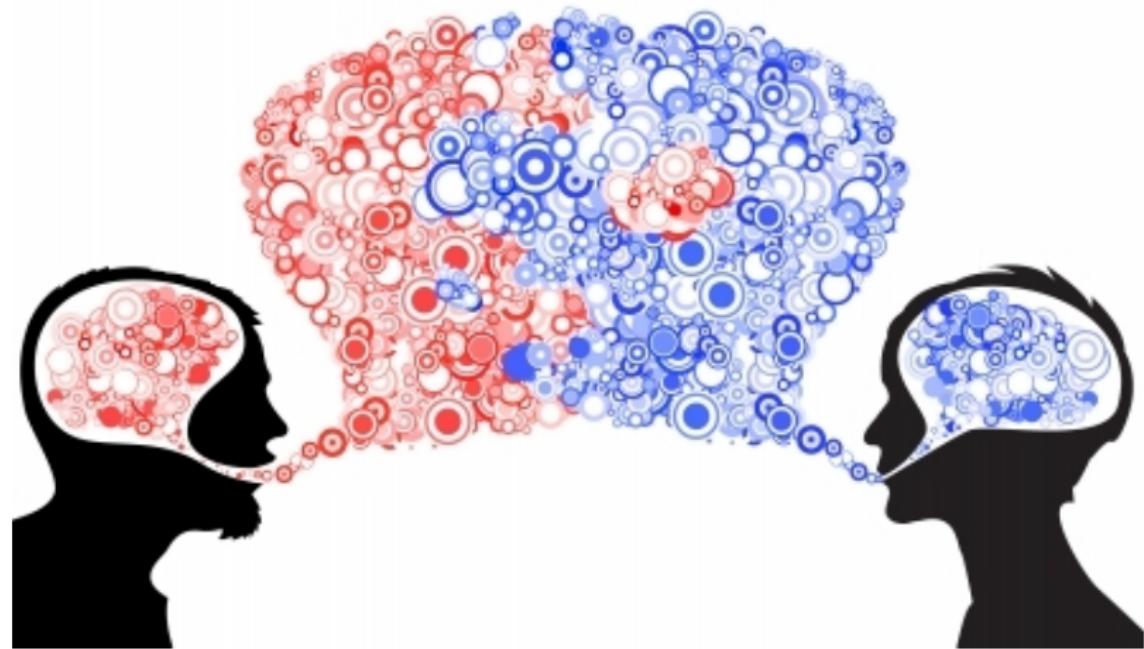

Patrick W. Kraft

MAPPS Meeting
Marquette University

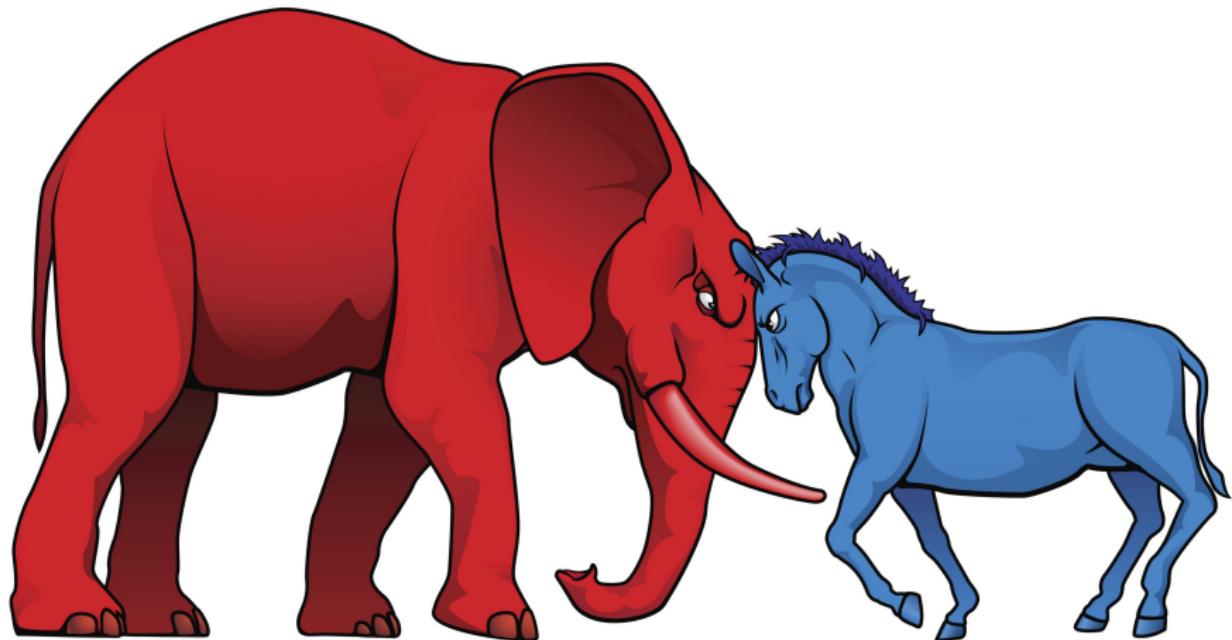

October 12th 2018

Introduction

How Can We Overcome Political Disagreements?

Political Disagreements and Moral Considerations

- ▶ Moral Conviction literature:

Liberals and conservatives are less likely to compromise if they hold moral convictions about politics.

(e.g., Skitka and Morgan, 2014; Ryan, 2017)

Political Disagreements and Moral Considerations

- ▶ **Moral Conviction literature:**

Liberals and conservatives are less likely to compromise if they hold moral convictions about politics.

(e.g., Skitka and Morgan, 2014; Ryan, 2017)

- ▶ **Moral Foundations literature:**

Liberals and conservatives are more likely to compromise if they focus on the same moral foundations.

(e.g., Graham, Haidt, and Nosek, 2009; Haidt, 2012)

HOT NEW RISING TOP GILDED Wiki of CMV

Get Internet speeds starting at 100 Mbps. Make it a bundle and enjoy 200+ TV channels and unlimited calling.

CMV: A company going public inevitably will sacrifice its humanity and become inherently concerned about money only

CMV: Before bringing someone else into your life, you should have a happy independent life worth sharing. Adding a romantic partner to fix your unhappiness is not a solution.

CMV: An entire class performing extremely poor on a test is a clear indicator a professors teaching style needs to be evaluated

CMV: Religious freedom should not include the right to turn away gay children and teachers

CMV: People who wish to transition genders need to wait until they are at least 21

CMV: Reddit is just as bad as most other social media networks

CMV: Very few people in the 1% are actually "self made."

CMV: People do not put human life as highly as they say they do

CMV: People should have to disclose if they are trans before intercourse

CMV: defensive gun uses are very rare.

CMV: China, not the US, will be the leading figure in the fight against global warming

CMV: The US should abolish the death penalty. It is morally wrong, economically inefficient, ineffective as a deterrent for heinous crimes, and it implicates each citizen (as a participant in the democracy) as part of state-sponsored murder.

CMV: Having an Abortion is more harmful than going through a pregnancy.

Seeking Life's Bare (Genetic) Necessities

COLD SPRING HARBOR, NEW YORK—How many genes does an organism need to survive? Last week at the genome meeting here,⁹ two genome researchers with radically different approaches presented complementary views of the basic genes needed for life. One research team, using computer analyses to compare known genomes, concluded that today's organisms can be sustained with just 250 genes, and that the earliest life forms required a mere 128 genes. The other researcher mapped genes in a simple parasite and estimated that for this organism, 800 genes are plenty to do the job—but that anything short of 100 wouldn't be enough.

Although the numbers don't match precisely, those predictions "are not all that far apart," especially in comparison to the 75,000 genes in the human genome, notes Siv Andersson of Umeå University in Sweden. He arrived at the 800 number. But coming up with a consensus answer may be more than just a matter of numbers alone, particularly as more and more genomes are completely mapped and sequenced. "It may be a way of organizing any newly sequenced genome," explains Arcady Mushegian, a computational molecular biologist at the National Center for Biotechnology Information (NCBI) in Bethesda, Maryland. Comparing an

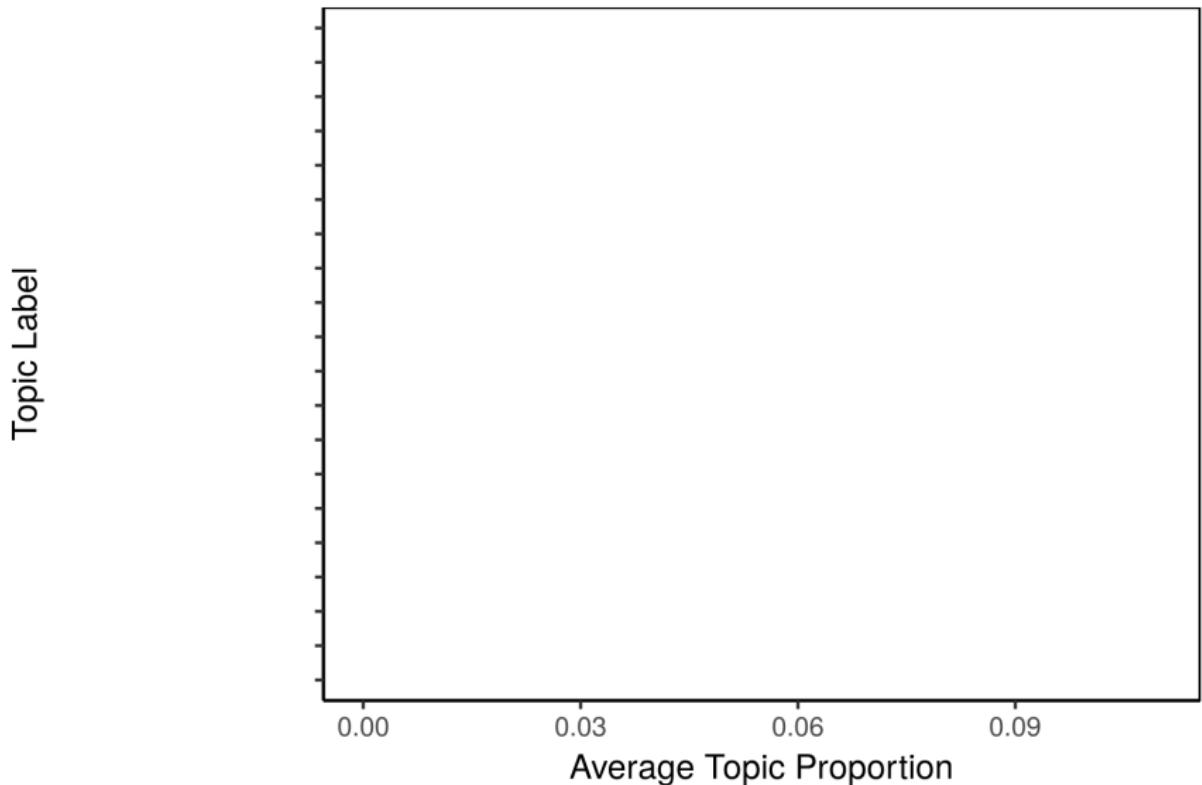

“Genome Mapping and Sequencing, Cold Spring Harbor, New York, May 8 to 12.”

Diagram illustrating the process of extracting topics from text using Latent Dirichlet Allocation (LDA). The process starts with a set of documents, represented by colored circles (pink, yellow, blue, green), which are processed by a computer analysis to yield topic proportions (represented by bars in a bar chart). These proportions are then used to assign topics to the documents. The diagram shows arrows pointing from the documents to the topics, and from the topics back to the documents. A legend indicates that pink represents 'modern genes ~122 genes', yellow represents 'ancient gene set ~128 genes', blue represents 'parasite-specific genes ~4 genes', and green represents 'modern genes ~250 genes'. The process involves stripping down the genome to find the minimal gene set required for life.

Measuring Morality in Text

Moral Foundations Dictionary:

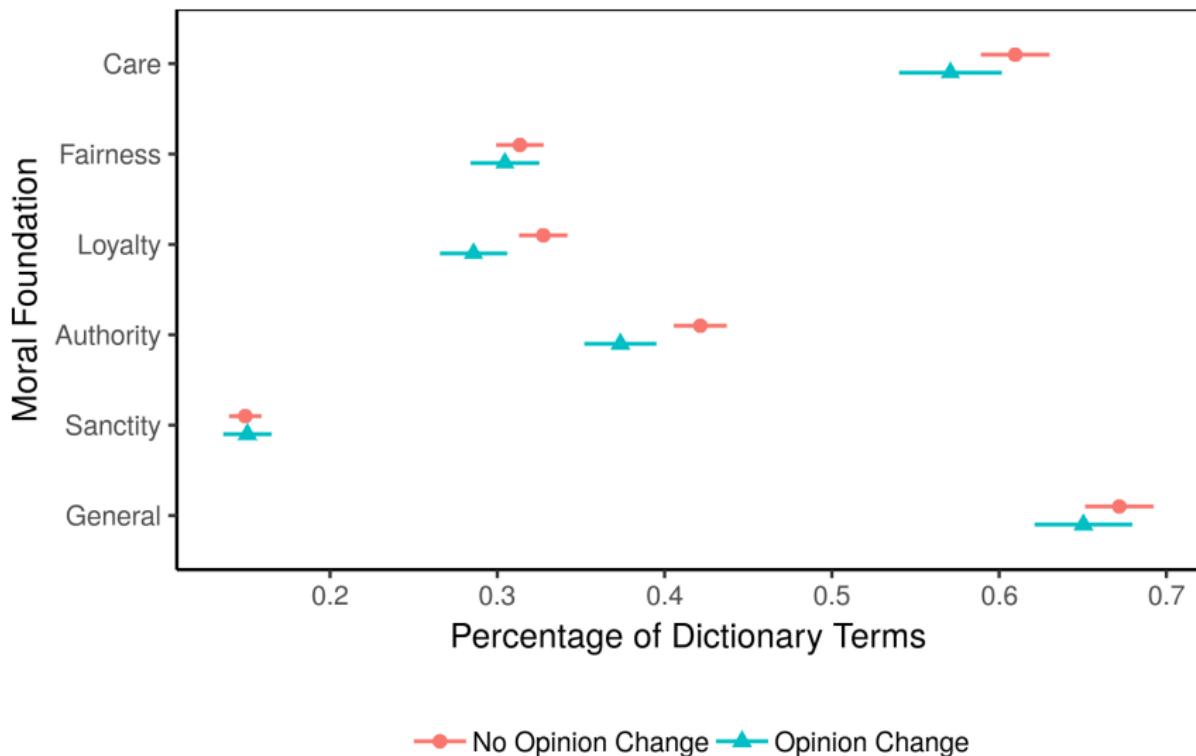

(c.f., Graham, Haidt, and Nosek 2009 and <http://www.moralfoundations.org/>)

- ▶ **Care**: caring, compassion*, empath*, preserve, protect*, ...
- ▶ **Fairness**: equal*, honest*, impartial*, justice, favoritism, ...
- ▶ **Loyalty**: collectiv*, communal, family, homeland*, unite*, ...
- ▶ **Authority**: command, comply, duty, hierarch*, honor*, ...
- ▶ **Sanctity**: abstention, clean*, decen*, holy, innocent, ...
- ▶ **General Morality**: character, commendable, decen*, ethic*, moral*, ...

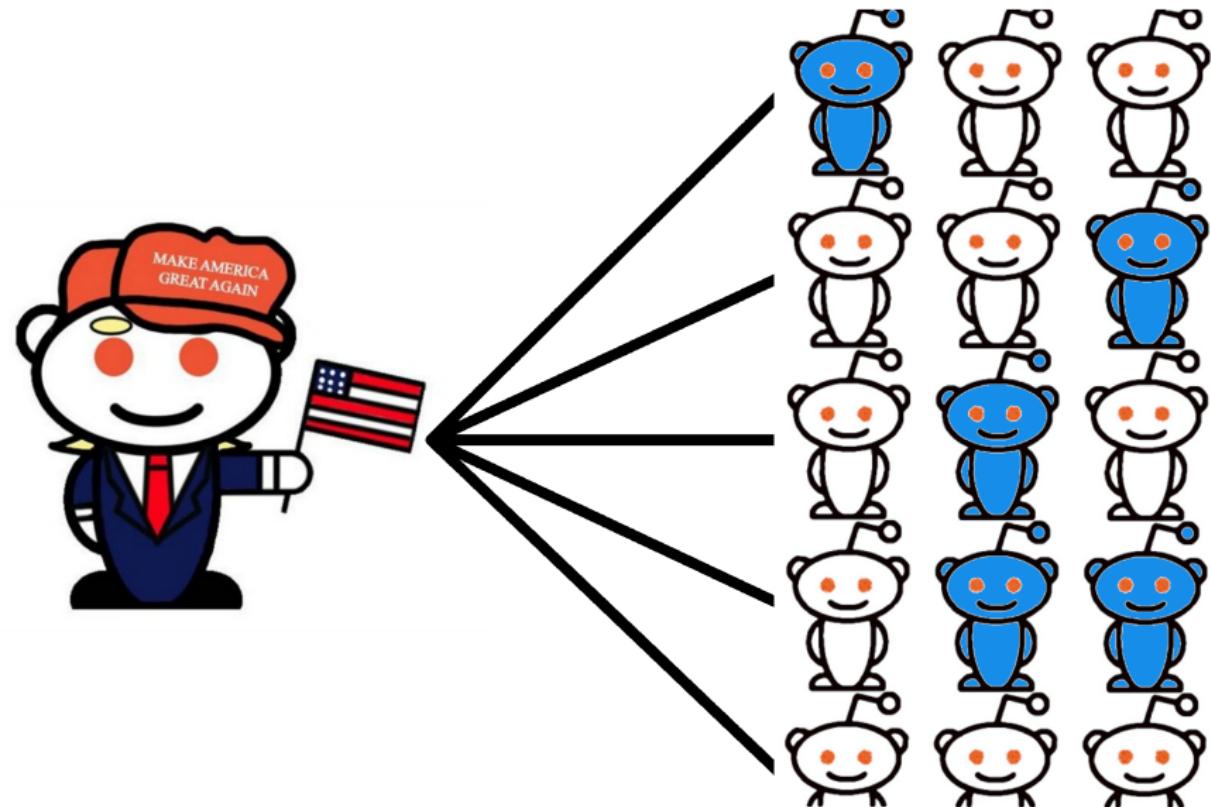

Moral Foundations and Persuadability

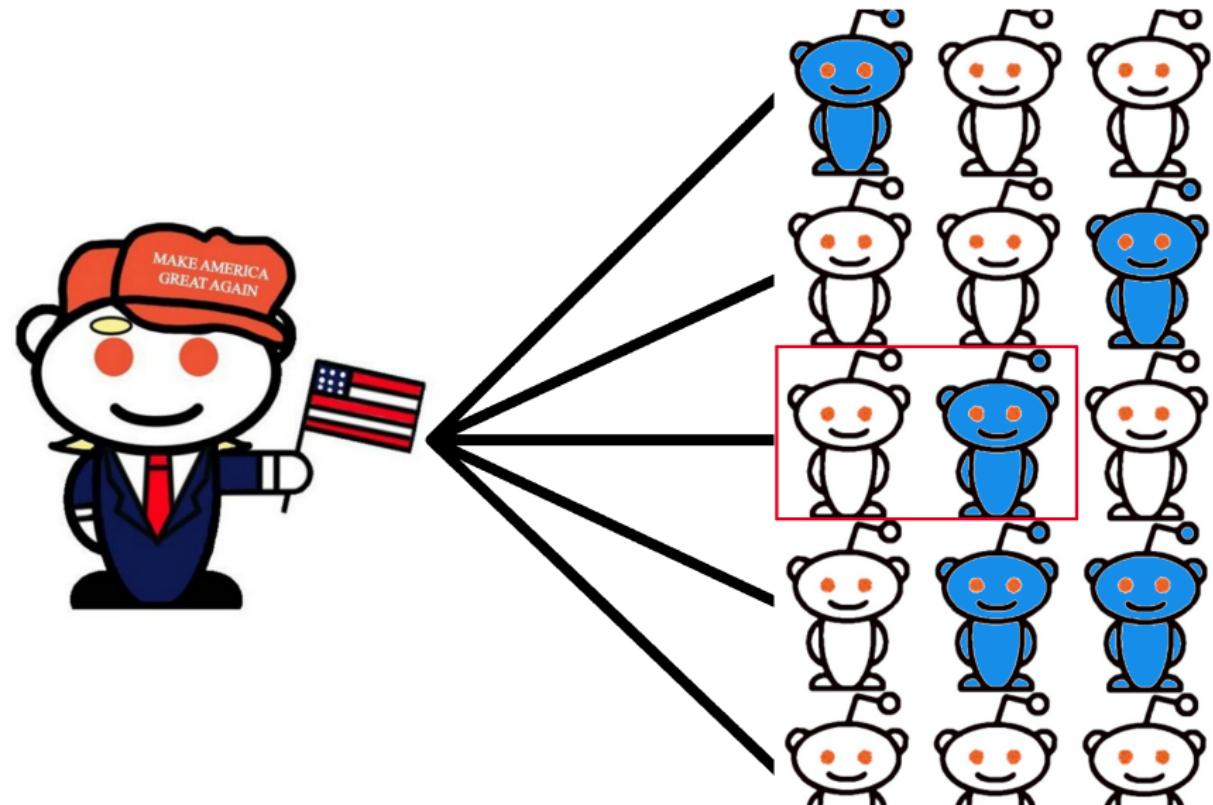

Moral Foundations and Persuadability

Exploring the Persuasiveness of Counterarguments

Exploring the Persuasiveness of Counterarguments

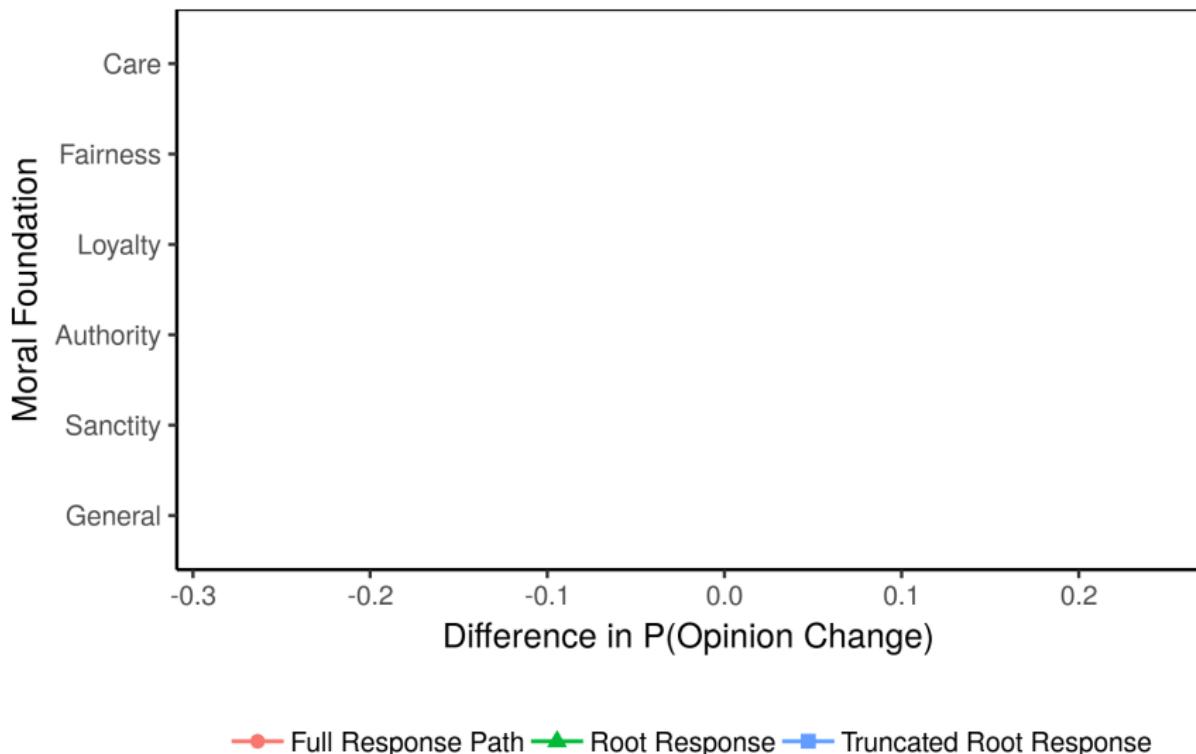

Matching Similar Arguments

$$\text{Jaccard}(B_\Delta, B_{\neg\Delta}) = \frac{|B_\Delta \cap B_{\neg\Delta}|}{|B_\Delta \cup B_{\neg\Delta}|}$$

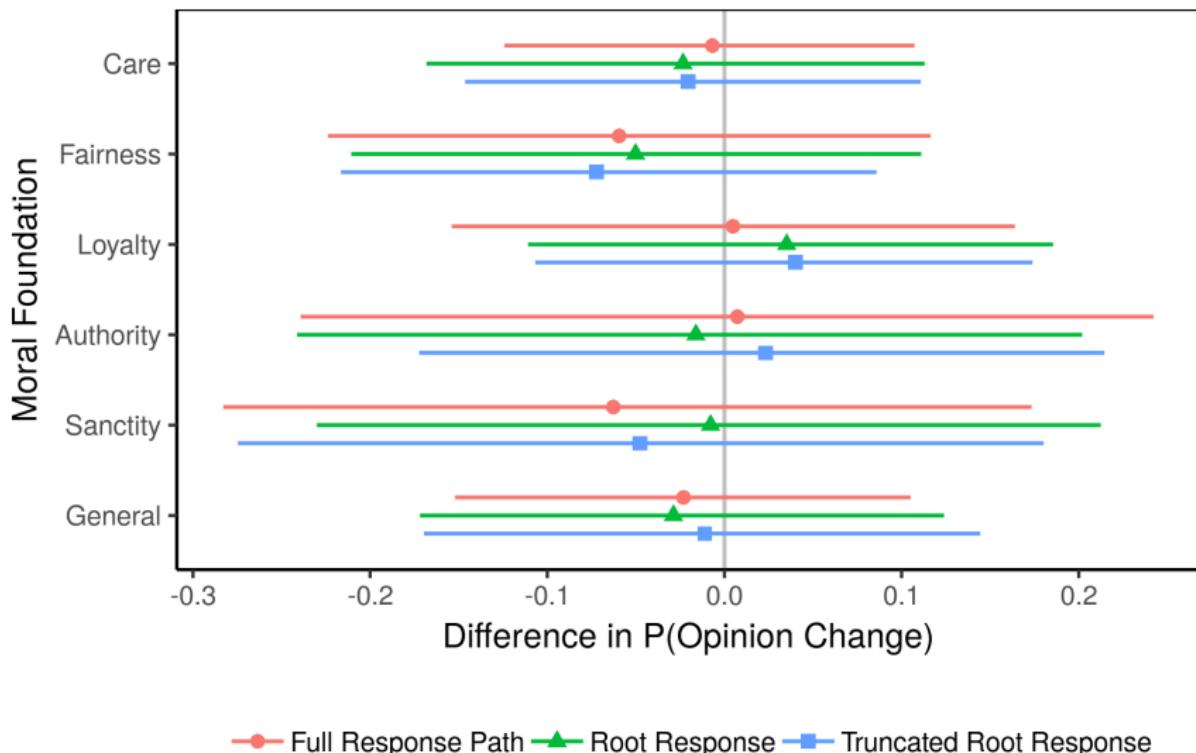

Question:

Which of two lexically similar arguments is the successful one?

—●— Full Response Path —▲— Root Response —■— Truncated Root Response

Measuring Moral Congruence

$$\text{MFT Congruence} = \frac{\vec{a} \cdot \vec{b}}{||\vec{a}|| ||\vec{b}||}$$

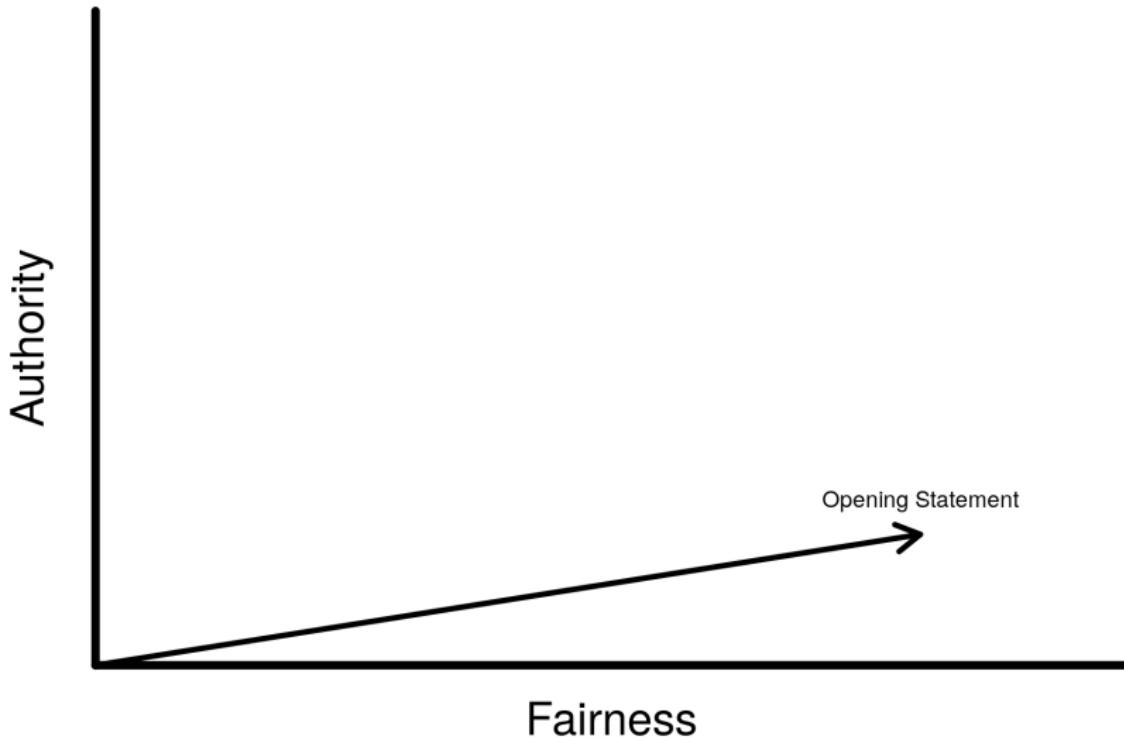

Basic Approach:

Measure the cosine similarity in dictionary counts between opening statements and counterarguments

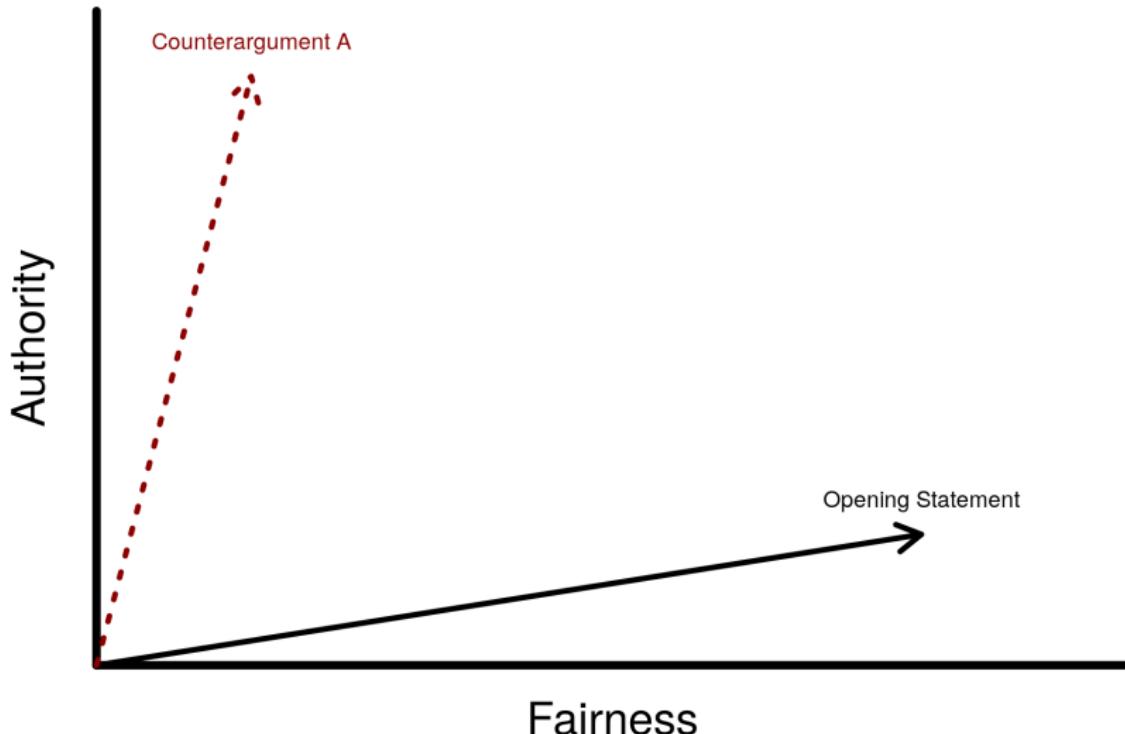

Measuring Moral Congruence

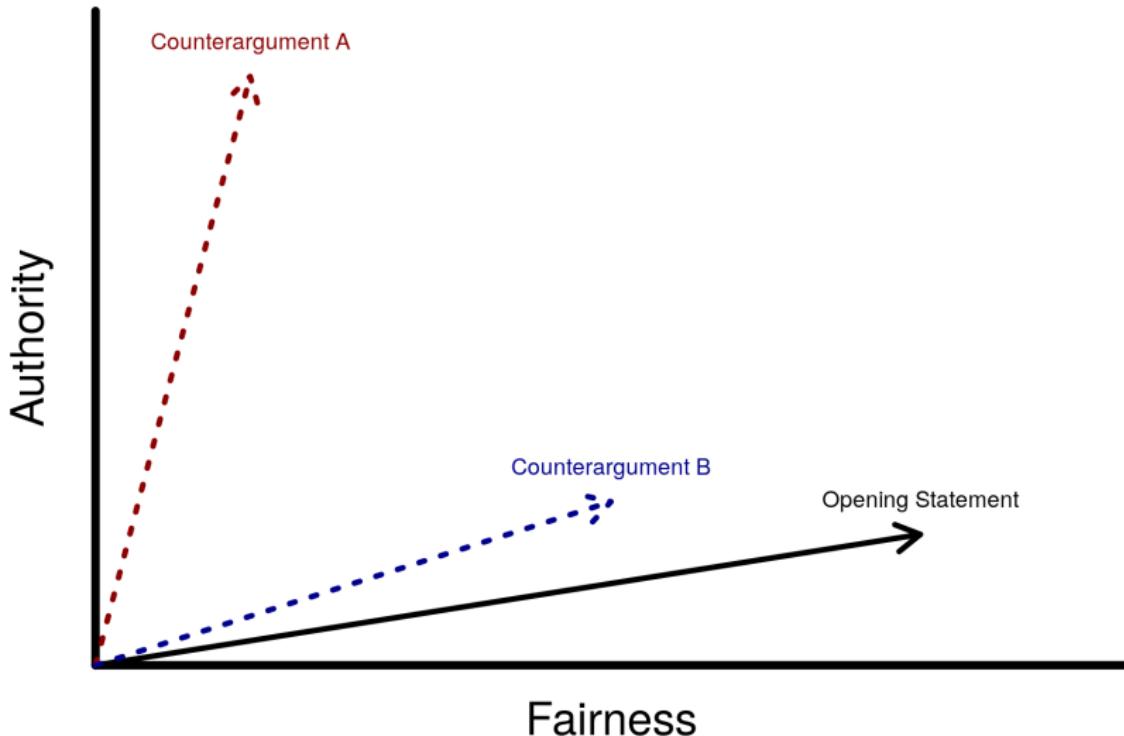

Measuring Moral Congruence

Moral Congruence and Persuasiveness

Moral Congruence and Persuasiveness

Conclusion – Discussions, Disagreement, and Morality

Two opposing hypotheses:

Moral Conviction: Arguments that involve moral appeals will be less persuasive than arguments that do not involve moral appeals.

Moral Foundations: Arguments that involve moral appeals will be more persuasive than arguments that do not involve moral appeals, but only if they are congruent with the opening statement's moral framework.

Conclusion – Discussions, Disagreement, and Morality

Two opposing hypotheses:

Moral Conviction: Arguments that involve moral appeals will be less persuasive than arguments that do not involve moral appeals.

Moral Foundations: Arguments that involve **moral appeals** will be **more persuasive** than arguments that do not involve moral appeals, but only if they are **congruent** with the opening statement's moral framework.

⇒ Moral appeals are futile unless we're speaking the same moral language

Future Directions

- ▶ Collect new data, extract additional information about individual users (other subreddits etc.)
- ▶ Survey users on /r/ChangeMyView
- ▶ Experimental manipulation of opening statements
- ▶ Discussions in the lab
- ▶ ...

Thank you for your attention!
